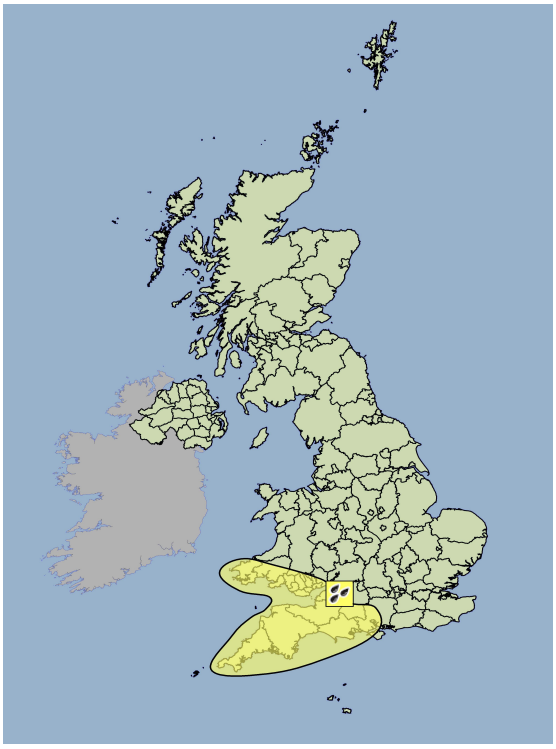
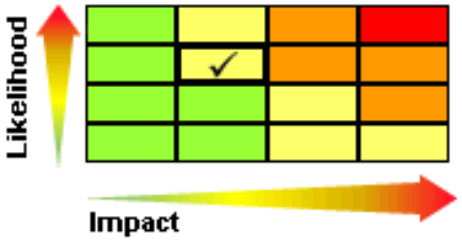
National Severe Weather Warning Service





Chief Forecasters Assessment
A complex frontal system will continue to affect southwestern parts of the UK, with pulses of heavy rain moving northwards at times, before clearing northeastwards on Wednesday. Precise timings of these spells of heavy rain remain uncertain, and there are also likely to be some drier intervals within this warning period. A further 20-30 mm of rain is possible in places in addition to that which has already fallen since Monday evening. The rainfall is likely to cause some minor flooding from either surface water or from rivers.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:20 on Tue, 11th Nov 2014** until **09:00 on Wed, 12th Nov 2014**

Further spells of rain, locally heavy, will affect southwestern parts of the UK during the rest of Tuesday, before clearing during Wednesday morning.

The public should be aware of the risk of localised flooding, perhaps exacerbated by fallen leaves blocking drainage courses.

This is an update to the warning issued on Monday.
